

Personal Expense Tracker System

Objective

Build a Python program that helps users track daily expenses while applying:

- Core Python (loops, conditions, functions, lists)
- Exception handling (input validation, runtime errors)
- File handling (store and retrieve expense data)

Problem Statement

Create a **menu-driven Expense Tracker** where users can:

- Add expenses
- View all expenses
- Calculate total spending
- Search expenses by category

All data should be stored in a file (`expenses.txt`).

Menu Design

1. *Add Expense*
2. *View Expenses*
3. *Total Expense*
4. *Search by Category*
5. *Exit*

Requirements

1. Add Expense

- Input:
 - Date
 - Category (Food, Travel, Shopping, etc.)
 - Amount
- Save data in file using **append mode**

2. View Expenses

- Read file
- Display all records in a readable format

3. Total Expense

- Calculate and display total amount spent

4. Search by Category

- Input category
- Show matching expenses only

5. Exit

- Close program safely
